

TOTAL PREMIX VALUE SOLUTIONS

Your success is Better Pharma pride.

All Premix products of Better Pharma have passed the quality assurance system "Total Premix Value Solutions". Our Premix homogeneously blends due to the order of mixing and has optimal pH suitable for vitamins and minerals stabilization. When mixed with feed, our Premix distributes evenly and the animals will have all vitamins and minerals completely according to the requirement. In addition, our products are highly safe and enhance animals' vitality and performance yielding excellent cost-benefit ratio. Better Pharma values the importance of standardization and has been awarded for the international standards, ISO 9001:2000, GMP, HACCP and ISO/IEC 17025. This can guarantee the quality of Better Pharma Premix products reaching international standard and can export globally. Producing quality products and proving to be effective in the field are Better Pharma business policy as "Total Premix VALUE Solution".

Better Pharma

Focus on producing the best quality premix

Better Pharma is a leader and a specialist focusing on developing and producing the best quality premix and other animal health products based on our innovative R & D manufacture for our customer benefits.

We, therefore, introduce the "Total Premix VALUE Solution" for standardization the value and quality of our premix from the beginning of raw material selection through every step of processing in order to remain stability of all vitamins and minerals for the best performance of animals. In addition, our products are highly quality and enhance animals' vitality and performance yielding excellent cost-benefit ratio.

TOTAL PREMIX VALUE SOLUTIONS

Raw Material Selection

AVL (Approval Vendor List) : Approved potential vendors from the best raw material resources and able to be traced back based on the GMP.

SQM (Supplier Quality Management) : Encouraging our supplier to be our business partnership.

Low Heavy Metal : Based on the EU regulation and the need of our food supply chain, we produce the lowest heavy metal content in our Premix.

Carrier :

We use quality corn cob. It is our chosen base because of

- Good flowability and adhering to the raw material due to the spherical molecule and sponge structure.
- Least interfering with vitamin and mineral quality.
- Passing the pesticide test for residue and contamination.

Production Process

Creating quality production

Pneumatic Transfer : Normally use in food processing, which raw materials transfer using air pressure technology will reduce contamination and heat throughout the production process. In addition, Bomb door using vibrating air will reduce the left-over of the raw materials in the mixer eventually yielding a good combination Premix.

Dosa System : The best Premix production technology using computerized controlling system.

- Weighting System : Meticulously to mg with 4 digits and separating mineral weighting (Macro Dosing) and vitamin weighting (Micro Dosing).
- Order of Mixing : Avoiding chemical interaction among raw materials by ordering of mixing in order to remain 100% vitamins and minerals stability based on nutritional and scientific knowledge.
- Computerized control : Dosa System will stop the production system when finding any mistake and the production will resume when fixed to yield the accuracy of the formulation in every batch.

Dosa System

Pneumatic Transfer

Research and Development Program

Formulation development

For the suitable formulation, Better Pharma products have been developed continuously from the beginning of raw materials, vitamins and minerals selection through every step of processing and analysis from the specialists and simulate the production in a lab scale before for the best quality products.

Premix physical quality tests

- ▲ V - Vitacity
- A - Angularity
- L - Liability
- U - Uniqueness
- E - Empower

All Premix physical tests are our routine tests in the laboratory when making the new formulation and producing in a lab scale before the commercial production.

Traceability

Real time e-Traceability

Tracing back to the production system for our product guarantee according to the global food safety policy with our "OpsSmart™" program including ProductionSmart™ QualitySmart™ FreightSmart™ and TraceSmart™ which is able to test through the network from which the raw materials used in that Premix coming in order to create the confidence through the whole supply chain according to backward and forward traceability.

Grant Product Guarantee

Certification and Accreditation

Better Pharma Premix production system has been standardized throughout the system both chemical and physical tests based on the international standards, ISO 9001:2000, GMP, HACCP and ISO/IEC 17025 and continuously developed to BRC ISO 22000, ISO 14000 in order to remain the best quality and quantity of our products until the expiration date.
